

Dermatology Models

We offer specialised preclinical services using rodent dermatology models to support skin-related drug development. Our expertise includes models for delayed type hypersensitivity, pruritus, and atopic dermatitis in rodents. With capabilities in clinical scoring, histopathology, imaging, and biomarker analysis, we provide reliable, high-quality data to accelerate your dermatological research.

- **Compound 48/80-Induced Itch**
- **β -Alanine-Induced Itch**
- **Oxazolone-Induced DTH Model**
- **IMQ-Induced Psoriasis Model (Under development)**

Our dermatology models enable targeted screening and optimisation of therapeutic candidates for inflammatory and immune-mediated skin conditions.
